Toxic Substance Control Act Regulation (TSCA)

January 2025

As amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act the Toxic Substance Control Act (TSCA) considees the five final rules outlines by the Environmental Protection Agency (EPA) on January 6, 2021. With the aim to reduce exposures to certain chemicals that are persistent, bioaccumulative and toxic (PBT). These chemicals build up in the environment over time and may result in potential risk to exposed populations, including the general population, consumers and commercial users.

The rules limit or prohibit the manufacture (including import), processing, and/or distribution in commerce (including within articles) of the following PBT chemicals:

- PIP (3:1), phenol, isopropylated phosphate (3:1), CAS 68937-41-7 (restriction date per originally published final rule: March 8, 2021).
- DecaBDE, decabromodiphenyl ether, CAS 1163-19-5 (restriction date per originally published final rule: January 6, 2021).
- 2,4,6 TTBP, 2,4,6-tris(tert-butyl)phenol, CAS 732-26-3 (restriction date per originally published final rule: March 8, 2026).
- HCBD, hexachlorobutadiene, CAS 87-68-3, (restriction date per originally published final rule: March 8, 2021).
- PCTP, pentachlorothiophenol, CAS 133-49-3 (restriction date per originally published final rule: March 8, 2021).

Invertek have reached out to suppliers at all stages of our supply chain, requesting their TSCA declarations, to certify that they are compliant with the requirements. Affirming that none of the above chemicals are intentionally used or added to their products. Therefore, we can confirm to the best of our knowledge that we are compliant with this regulation.
